PROFESSIONAL SUMMARY

Accomplished **Android Software Engineer** with 3+ years of dedicated native Android engineering and 8+ years of broader software systems experience. Deeply skilled in **Kotlin, Android Jetpack, MVVM + Repository Pattern, Coroutines, StateFlow/SharedFlow, and Room Database (SQLite)**. Proven track record shipping production-grade applications for nationwide logistics fleets, financial **Digital Wallet** suites, and enterprise Warehouse Management Systems (WMS). Specialized in building **resilient offline-first architectures**, low-latency background synchronization, hardware SDK integrations (RFID/Barcode), and integrating **AI features (streaming LLM responses, vision, and speech APIs)** for next-generation mobile user experiences.

CORE TECHNICAL COMPETENCIES

Android Core & Architecture	Kotlin, Java, MVVM, Clean Architecture, Repository Pattern, Android Jetpack (Navigation, LiveData, ViewModel, Room, WorkManager)
Asynchronous & Reactive	Kotlin Coroutines, Kotlin Flow (StateFlow / SharedFlow), Reactive Streams, Background Workers, Concurrency Management
Storage & Offline-First	Room Database (SQLite), Offline-First Caching, Bi-Directional Sync, DataStore, SharedPreferences, Conflict Resolution
Networking & AI Integration	Retrofit, OkHttp, RESTful APIs, SSE / Streaming Responses, WebSockets, Generative AI / LLM API Integration, MLKit
Security & Hardware SDKs	Digital Wallet Security, Cryptographic Session Auth, Payment Gateways, RFID (HF/UHF SDKs), Barcode Laser Scanners, NFC

PROFESSIONAL EXPERIENCE

Android Developer (WMS & RFID Hardware Integration) • PT Wahana Datarindo Sempurna July 2022 – June 2023
South Jakarta, Indonesia

- Engineered native Android Warehouse Management System (WMS) client applications deployed on industrial rugged handheld devices across major enterprise logistics facilities.
- Integrated hardware vendor SDKs for UHF/HF RFID tag reading and laser barcode scanning, ensuring sub-50ms scanning response times in high-volume environments.
- Designed a resilient offline-first architecture utilizing Room Database (SQLite) and Coroutines-driven background synchronization via REST APIs, eliminating data loss during warehouse dead-zones.
- Implemented MVVM + Repository architecture, reducing app crash rates to under 0.1% and significantly speeding up UI rendering performance.

Android Developer (Digital Wallet & Courier Logistics) • PT Satria Antaran Prima Tbk. (SAP Express) Jan 2022 – June 2022
DKI Jakarta, Indonesia

- Developed and launched critical native Android modules for Courier Dispatch, real-time Package Tracking, and the internal enterprise Digital Wallet.
- Implemented hardened client-side financial security: cryptographic token verification, PIN/Biometric auth, and tamper-resistant transaction payloads.
- Integrated third-party payment gateways and central logistics routing APIs with comprehensive network retry logic and graceful error handling.
- Optimized memory usage and battery consumption for courier devices running GPS-tracking services continuously throughout 10+ hour shifts.

Head of Software Department (Mobile & Enterprise Systems) • PT Wahana Datarindo Sempurna June 2023 – June 2025
South Jakarta, Indonesia

- Oversaw mobile application engineering standards, code reviews, and hardware-software integration across 10+ national-scale enterprise tender implementations.
- Defined mobile client-server API contracts (RESTful/JSON) with backend engineering teams, standardizing data serialization and authentication schemas.
- Conducted performance profiling, memory leak detection, and network payload optimizations for enterprise mobile deployments.

- Spearheaded AI workflow automations and REST API data pipelines, researching agentic architectures and streaming data synchronization.
- Authored comprehensive system specifications, API documentation, and mobile client interface standards for government digital initiatives.

KEY FEATURED PROJECTS

Enterprise WMS & RFID Mobile Scanner Suite • Android Native Application

Tech: Kotlin • MVVM • Room DB • Coroutines & Flow • Retrofit • RFID HF/UHF SDK • Barcode SDK

Constructed a production-grade Android application deployed across 10+ national tender operations. Features real-time handheld UHF RFID tag reading, offline-first local database caching, and high-throughput server synchronization.

SAP Express Logistics & Digital Wallet Mobile App • FinTech & Logistics Mobile

Tech: Android (Java/Kotlin) • Digital Wallet • Cryptographic Auth • Payment Gateway • GPS Tracking

Engineered mission-critical mobile features including secure digital wallet transactions, parcel barcode scanning, and real-time delivery milestone updates for nationwide courier fleets.

AI-Powered Assistant & Streaming Mobile Client (PoC) • Mobile AI & Reactive UI

Tech: Kotlin • StateFlow • Coroutines • Server-Sent Events (SSE) • Gemini API • Jetpack

Implemented reactive mobile client interactions consuming generative AI endpoints via streaming responses (Flow), complete with offline retry queue, partial response rendering, and network latency resilience.

EDUCATION

Bachelor of Informatics Engineering (S.Kom)

STMIK Nusa Mandiri, Jakarta
2017 – 2019

Associate of Computer Engineering (A.Md.Kom)

Universitas Bina Sarana Informatika (BSI), Jakarta
2013 – 2016

TARGET CERTIFICATIONS HIGHLIGHT

- Belajar Penerapan Machine Learning untuk Flutter & Mobile — Dicoding (2026)
- Pengembangan Generative AI berbasis LLM — Dicoding (2026)
- Dasar-dasar Mobile Programming Android dan Kotlin — Skill Academy
- Mastering Mobile Programming Android — Skill Academy
- Kotlin from Zero to Hero & Memulai Pemrograman Dengan Kotlin — Udacoding / Dicoding
- Belajar Prinsip Pemrograman SOLID — Dicoding (2026)
- + 37 additional verified credentials in AI, Cloud, Mobile & Systems.
